

Professional Profile Summary

About

This profile is generated from our conversations and summarizes your professional journey, interests, and goals. Medical information has been intentionally excluded.

Professional Snapshot

Name: Ilayabharathi M

Role: Senior Software Engineer – Data Engineering

Experience: Approximately 5 years in Data Engineering and Big Data.

Core Expertise

- Apache Spark (Scala & PySpark)
- Hadoop, Hive, SQL, BigQuery
- Google Cloud Platform (Dataproc, Dataflow, BigQuery, GCS, Pub/Sub, Composer)
- ETL & Data Pipelines
- CI/CD and Jenkins
- Python for automation and AI applications

AI & Agentic AI

Strong interest in Agentic AI. Hands-on experience with: Google ADK Model Context Protocol (MCP) Custom MCP servers RAG pipelines using Qdrant and embeddings Vector databases and LLM integrations Cloud Run deployment

Notable Projects

- HR Salary Agent using Google ADK and custom MCP.
- BigQuery MCP server.
- Retrieval-Augmented Generation (RAG) pipelines with vector databases.
- Production-style data ingestion and transformation pipelines on GCP.

Learning Focus

Currently focusing on: Advanced Agentic AI architectures LangGraph concepts Google ADK ecosystem MCP deployment patterns Production-grade RAG systems

Career Highlights

- Senior Software Engineer at EPAM.
- Strong background in Big Data Engineering.
- Interested in AI-powered Data Engineering solutions.
- Preparing for advanced AI Agent and Data Engineering interviews.

Personal Interests

- Building AI applications.
- Learning emerging AI technologies.
- PC gaming.
- Continuous technical upskilling.

Strengths

- Quick learner
- Strong problem-solving ability
- Comfortable with cloud-native architectures
- Enjoys building end-to-end systems rather than isolated components

Future Vision

To become an expert AI/Data Engineer capable of designing enterprise-scale autonomous agents, production RAG platforms, and cloud-native AI solutions.
